

# CSC436 Lab 09

---

Take screenshots of the process as you work through the lab, and save them to a single Word or PDF document.

This lab should be completed in the CSC436\_Domain

## PowerShell Empire

Your task is to demonstrate at least five different modules in PowerShell Empire. These must span at least three different categories. You're of course welcome to do more, if you'd like.

Some example categories:

- Collection
- Code\_execution
- Credentials
- Exfiltration
- Lateral\_movement
- Persistence
- Privesc
- Recon
- Situational\_awareness

Take screenshots proving you ran five modules, and provide a very brief description of what that module does. Be sure to include screenshots of any data the module may return, or any changes made to the target host.
